

# GeoStat Quick Reference Guide

## Interaction with Geomet

### Step 1

GeoStat interacts with Geomet by tagging individual attributes from features that you want to track with SPC. You activate the tagging process by one of two methods: Press the <p> key on the keyboard or by highlighting the feature and then right-clicking your mouse. From the pop-up menu, select *[Feature Tags]*.

Print

Feature  
Tags  
<p>

### Step 2

Select under the “GS” column select the attribute you wish to track by pressing the button.

### Step 3

Fill in the Nominal,  $\pm$  Tolerance Limits, Subgroup Size (min. 2) and Subgroup Lookback (how many subgroups to include in calculations) and press <OK>
